2009 Gaucher hastalığında güncel standart tedavi imigluserazla ERT'dir.

Peroni DG et al. Effective desensitization to imiglucerase in a patient with type I Gaucher disease. J Pediatr 2009;155:940-1.

We describe a child who had anaphylactic hypersensitivity to imiglucerase therapy for Gaucher disease. Treatment was stopped and symptoms returned. After immune desensitization to imiglucerase using a rush protocol, the patient was able to resume treatment and has not had further hypersensitivity complications to date.
