## 2008 Gaucher'de yaşam beklentisi normal popülasyondan düşüktür.

Weinreb NJ et al. Life expectancy in Gaucher disease type 1. Am J Hematol 2008;83:896-900.

We estimated life expectancy at birth for Gaucher disease type 1 (GD1) patients by comparing survival data from GD1 patients enrolled in ICGG Gaucher Registry to the U.S. population using standard life table methods. 2,876 GD1 patients had 102 reported deaths in 13,509 person-years of follow-up. Estimated life expectancy at birth was 68 y, compared with 77 y in reference population; splenectomized patients, 64 y; nonsplenectomized, 72 y. Causes of death for 63/102 patients were malignancy (17/63), cardiovascular (11/63), and cerebrovascular (8/63). Estimated life expectancy at birth for GD1 patients was -9 y less than reference population. Malignancies did not contribute to shortened life expectancy.
