## ICGG Gaucher Kayıt Sistemi 1991'den bu yana Gaucher hastalığı çalışmalarının bel kemiğidir.

Weinreb NJ, Kaplan P. The history and  
accomplishments of the ICGG Gaucher registry. *Am  
J Hematol* 2015;90 Suppl 1:S2-5.

The International Collaborative Gaucher Group (ICGG) Gaucher Registry (clinicaltrials.gov NCT00358943) is the largest ongoing, longitudinal, international database in the world that tracks the clinical, demographic, genetic, biochemical, and therapeutic characteristics of patients with Gaucher disease globally, irrespective of disease severity, treatment status, or treatment choice. Launched in 1991, the governance and scientific direction of the Registry is provided by an international group of physician experts in Gaucher disease with operational support from Genzyme, a Sanofi company (Cambridge, MA). Here we describe the history and some representative accomplishments of the ICGG Gaucher Registry.
